## **ABSTRACT**

Paddy is the staple food for the people of Andhra Pradesh. Now a days paddy crop also consumes maximum pesticides after commercial crops. The study revealed that majority of paddy farmers are willing to use neem pesticides in future. The major reason being, it is not dangerous to human beings and environmental friendly. The study also revealed that the major problem in use of neem pesticides was lack of field demonstrations and majority of the farmers suggested the require frequent visits by the company representatives.

**Key words :** Botanical Pesticide, Command Area
